Abstract	The article deals with Serbo-Croatian and Bulgarian journalese phraseology. Its main part is dedicated to problems of the semantic classification of set phrases from a three month file (January-April 1995) of the newspapers 24 chasa and Politika. Some aspects of the functional analysis of journalese phraseology are discussed with special attention to homonymy of phraseological units as well as to the defectivity of nouns, adjectives and verbs as their components
